## Industrial visit of EEE Department to hydro electric Linganamakki power generation station and Jog falls. 27/5/2022

The Linganamakki Power Plant is a hydropower project located in the Shivamogga district of Karnataka, India. Here are some key details about it:

- 1. **Location**: It is situated on the River, Linganamakki which is a tributary of the Sharavathi River.
- 2. **Capacity**: The exact capacity of the Power Plan Linganamakki t isn't readily available in public sources, but it forms part of Karnataka's network of hydropower plants, contributing to the state's electricity generation.
- 3. **Purpose**: Like many hydropower plants, its primary purpose is to generate electricity through the flow of water, which turns turbines connected to generators.
- 4. **Environmental Impact**: Hydropower projects can have environmental implications, affecting river ecosystems and local communities. Environmental assessments and mitigation measures are typically undertaken to minimize these impacts.
- 5. **Ownership and Operation**: The plant is likely owned and operated by the Karnataka Power Corporation Limited (KPCL) or another state agency responsible for power generation in Karnataka.
